

Proudly brought to you by Professionals in Engineering and Geoscience

Alberta's Professional Engineers and Geoscientists provide you with many of the essentials of daily living. The machines, systems and infrastructure that they create allow us to enjoy warmth, light, power, water and the ability to travel and communicate over distance.

Since 1920, Members of APEGGA, The Association of Professional Engineers, Geologists and Geophysicists of Alberta, have made a difference in the daily lives of millions of Albertans by bringing science and innovation to life.

The P.Eng., P.Geol., P.Geoph., and R.P.T. professional designations represent the highest standards of quality, professionalism and ethics in engineering and geoscience. APEGGA Members take pride in the role they play and the contribution they make to Alberta.

APEGGA and its 55,000 Members are committed to public safety and well-being through the self-regulation of the engineering and geoscience professions in Alberta.
